THE MOOD

The purpose of this project was to test the ability of us poor students troubling with this GREAT and enormous programming language that is Javascript. Maybe at this point we are just a little under the edge of this iceberg and our path is still long but we moved forward a little.

For me, this project was difficult and very tricky at some points, so it takes me some time to figure out what to do. After a looot of struggling however I'm here with my project, and I'm quite proud of it.

Outdoors: 6.40 / 10

Tolerance: 6.22 / 10

Leisure & Culture: 9.11 / 10

Internet Access: 4.49 / 10

Taxation: 2.44 / 10

Economy: 3.36 / 10

Environmental Quality: 4.28 / 10

Education: 4.16 / 10

Healthcare: 8.18 / 10

Safety: 6.60 / 10

Business Freedom: 6.19 / 10

Commute: 4.53 / 10

Travel Connectivity: 6.43 / 10

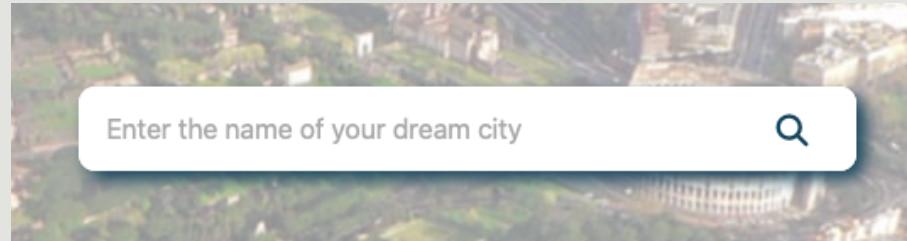

OBJECTIVE

The goal of this project is to create a page with a simple 'Google-style' search bar, where the user can type the name of a city of his choice, and it shows up some datas about that city.

That involves a summary, a quality of life score and a list of categories with their own score, like economy, education, healthcare, safety, etc..

To do so, it was request to use the Teleport's API which is an external service who provides data.

It was also request to use Webpack or similar, a bundler to better manage all the files for the project.

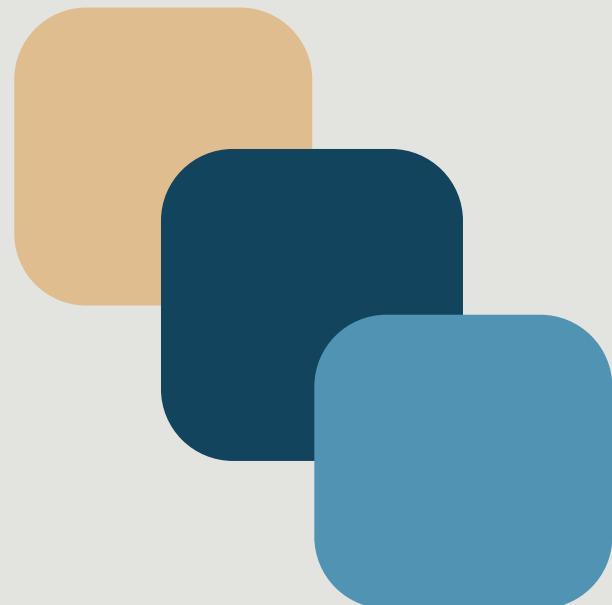

Your best place to live

Imagine to live and work in your **dream city**, which one could it be?

If you already don't know, let's give a look to our selection of the greatest cities in the world and their **quality levels**.

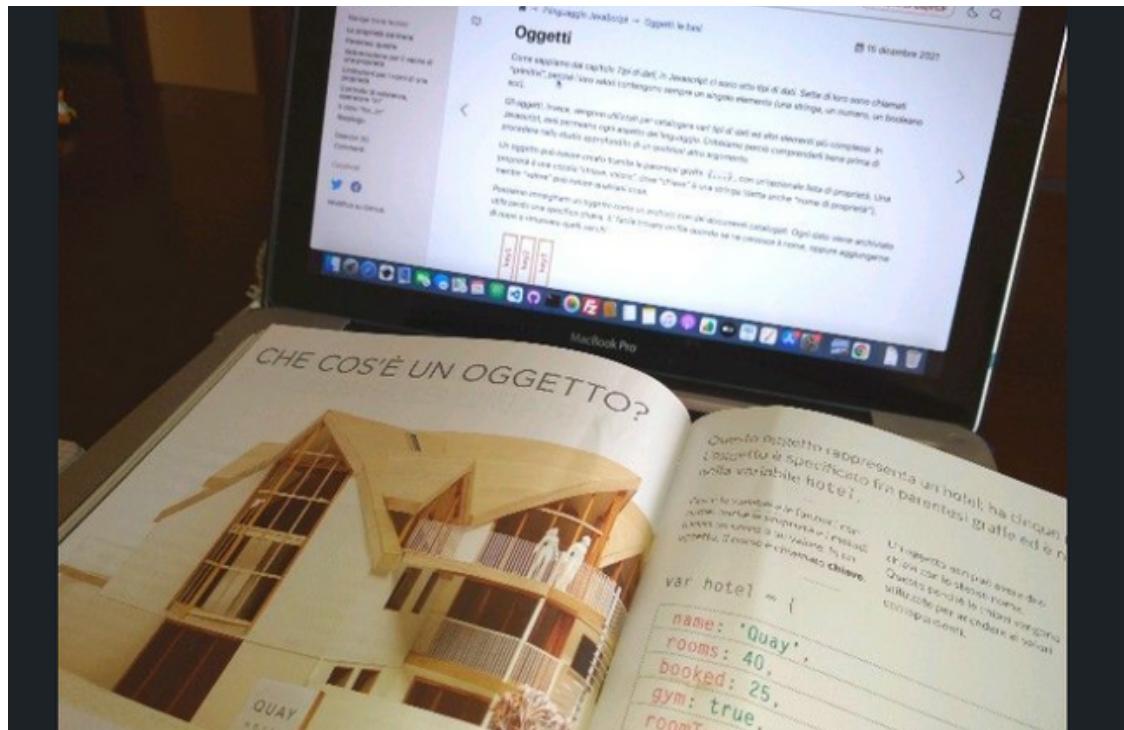

Compare **life quality data** for hundreds of cities worldwide and get a **city ranking** based on your **personal preferences**.

"Non perdere di vista l'obiettivo!"

Questo mi sono detta in questi giorni quando ho ripreso a studiare.

Non è semplice conciliare studio, lavoro e famiglia, le priorità si alternano ed essere costanti diventa difficile, ma ce la si può fare, ogni cosa a suo tempo.

Riparto dal modulo di JavaScript advanced, grazie a [start2impact | B Corp](#) e alla sua #community che dissipa i dubbi dei giovani dev.
